

Creative Friday - Science Tower Building

LO—To use scientific enquiry and testing to answer a question/ challenge.

In science sessions children were in mixed age groups and were set a challenge of building a free standing tower using only dried spaghetti, 1 large marshmallow and masking tape. Working together every group every week succeed in the challenge, the largest build was almost 60cm tall! The second half of the session was more creative, it allowed children to explore what they could make from spaghetti and midget gems. Some made structures and some made pictures.
